Weird Characters (25)

Description

I want to give the flag but why is it

broken?...COMPFEST9{a *a *a

Note: valid flag format is COMPFEST9{plain_text} where plain_text is a set of alphanumeric (a-z and A-Z) and/or underscore

Write Up

å ™å å žå ™å ™å ,å žå Žå å å å å %å ™å ,å

Those characters seems like broken unicode, what if we convert it from UTF-8 to Unicode (and replacing with actual space)

Those looks like a braille, lets decode it

dotsdotssomanydots

Thus, the flag is ${\tt COMPFEST9\{dotsdotssomanydots\}}$.
